

KWS COVER+™

Soil Protection Program

KWS COVER+™ soil protection program is a new high quality and environmentally sustainable program that will protect soil, water, and air in one product. It is being made available to farmers solely for the purpose of protecting soil between production of commercial crops. It is to be terminated in spring before maturity.

KWS COVER+™ Features and Advantages:

- Reduced soil erosion and improved soil aggregation: **KWS COVER+™** will quickly develop a soil canopy that will protect soil from wind and water while the massive root system will aid in aggregating soil to reduce compaction and allow improved moisture penetration through the hard pan.
- Weed suppression and reduced weed control costs: The early competition and allelopathic presence of **KWS COVER+™** will work to control and reduce weeds for subsequent crops, especially herbicide tolerant weeds with less herbicide options.
- Nutrient preservation and carbon capture: The added season growth of **KWS COVER+™** will sequester nutrients and ultimately organic matter and soil microbes to improve carbon capture during the crop offseason and make nutrients available for subsequent crops.
- Known genetics and consistent germination: **KWS COVER+™** is a first-generation common rye seed that provides high germination power like its parents.

KWS COVER+™ Benefits:

- Improved soil health and more profitable crops: **KWS COVER+™** conserves soil, water and nutrients making it a more resilient and healthy soil medium for future crops.
- Excellent product performance: **KWS COVER+™** provides farmers with a consistent high-quality soil protection program in terms of pedigree and germination power to establish and develop excellent ground protection between crops.
- Improved sustainability position: **KWS COVER+™** provides farmers with a sustainability message for the wider value chain including consumers, processors, exporters and governments which may include increased conservation awareness, market access, and incentives from buyers, industry or governments.

JOIN OUR MISSION:

Become part of an innovation that values soil health, product performance and environmentally sustainable agricultural practices. Connect with us today to learn more about our **KWS COVER+™** soil protection program, how we can help and how you can adopt this exciting new technology. Together, we can make a difference for your soil, your environment, and your future.
